Preface to the third edition xiii

PART 1 Fundamental factors governing yacht performance

Introduction: the nature of the problem 3

Performance 5

A Forces and geometry of sailing to windward 7

Aerodynamic and hydrodynamic forces 9

The Ten Degree Yacht 15

Speed made good to windward 23

B Sail/hull interaction in light and strong winds 24

Sheeting angle 31

Heeling forces 33

Hull responses 35

C Centreboard or fin-keel efficiency 37

Aspect ratio 40

12-Metre boats 43

D Optimum course to windward 47

Resistance 47

Sail area 55

Shifting ballast 55

E Stability effect on performance 60

Stability 60

Development 65

vi CONTENTS

F	All-round performance	70
	America's Cup	75
	Waterline	75
G	Highspeed sailing	84
	Multihulls	86
	Transatlantic races	89
	World speed records	99
	Hydrofoils	103
	Foil control	110
	Lateral stability	114
	The rig	115
	Wing sails	116
	Other solutions	122
H	Land and hard-water sailing craft	128
	Ice yachts	130
	Apparent wind	131
	Stability	135
	Speed potential	135
	Sailing boats	141
	Drag	145
	References and notes	154

PART 2 Basic principles of aero-hydrodynamics: aerofoil and hydrofoil action

A	Elementary concepts and assumptions	167
	(1) Air and water: analogies and differences	167
	(2) Ideal and real fluids, two-dimensional flow	170
	(3) Potential frictionless flow pattern; interrelation between velocity, pressure and force	172
	(a) Bernoulli's equation	175
	(b) Friction effect on flow pattern	182
	(4) Circulation and Magnus effect	186
	(a) Rotating cylinder as a crude aerofoil	189
	(b) Fletner's rotorship	194
	(5) How lift is generated by a foil	198
	(a) Kutta-Joukowski hypothesis	202
	(b) How quickly lift is developed	206
	(c) Practical implications	209
	(6) A closer look into some foil characteristics	211
	(a) Methods of presenting pressure distribution	213
	(b) Rate of lift growth with incidence (two-dimensional flow)	215
	(c) Factors limiting lift growth	219
	(d) Peculiar behaviour of some thick foils	224

B	Drag-viscosity phenomena	227
	(1) The boundary layer, pressure drag and skin friction	227
	(a) Laminar and turbulent boundary layer	230
	(b) Calculation of skin friction	236
	(2) Streamlining	240
C	Reynolds Number and scale effect	251
	(1) What one can learn from golf ball behaviour	252
	(2) Similarity law of Osborne Reynolds	256
	(3) Ways of reducing drag	259
	(4) Variation of foil drag with Reynolds Number	265
	(a) Roughness of the wetted surface	269
	(b) Shape (curvature) of the wetted surface and associated pressure gradient	275
	(c) Ways of reducing skin friction: polymers, flexibility of wetted surface	286
	(5) Lift and Reynolds Number effect on foil lift efficiency	296
	(a) Effects of leading edge, camber and thickness on stall pattern	296
	(b) Flow pattern round thin, sail-like foils	302
	(c) Thick versus thin foil controversy	306
	(d) Rig of <i>Lady Helmsman</i>	313
	(e) Thin foil properties	321
	(f) Padded sails	327
	(g) Significance of pressure distribution, mast effect	328
	(h) Roughness effect	339
D	Three-dimensional foils	343
	(1) Vortex system developed round a finite span foil	347
	(2) Mechanical and electromagnetic analogies	355
	(a) Analogy for simple hydrofoil	358
	(b) Variation of circulation along the span	360
	(3) Induced flow and associated induced drag	367
	(a) Effective angle of incidence and induced drag	371
	(b) Elliptic planform, elliptic load distribution	376
	(c) Sail plans	380
	(d) Triangular planform	385
	(4) Mirror-image concept of the sail or foil: effective aspect ratio	395
	(5) Foil-shape effects	408
	(a) Planform effects	411
	(b) Influence of taper ratio and twist on foil efficiency	425
	(c) Effect of aspect ratio on maximum lift	443
	(d) Sweep angle effects and low AR foils	447
	(e) Slender body theory—implications and shortcomings	460
	References and notes	473

PART 3 Research on sails: practical implications

- A Speed performance prediction: scope and limiting factors 485
- B Sail design in general 500
 - (1) Loading 504
- C How and why sail forces are determined 517
 - (1) Determination of sail forces by strain gauging the rig 522
 - (2) Determination of sail forces by measuring mooring loads 524
 - (3) Determination of sail forces by correlating results of full-scale trials and model tank test (Gimcrack sail coefficients) 526
 - (a) Instruments 530
 - (4) Analytically derived sail coefficients 535
 - (5) Determination of sail forces by wind tunnel tests 542
- D Wind tunnel results: factors affecting the sail forces and their effects on boat performance 548
 - (1) Finn sail tests 548
 - (a) Influence of kicking strap tension 549
 - (b) Influence of changes in luff and foot tension 554
 - (c) Influence of rig height above sea level 555
 - (d) Influence of wind speed on sail shape 556
 - (2) Effects of sail shape on boat performance 557
 - (3) Sail trim and tuning 565
 - (a) Kicking strap control 574
 - (b) Twist correction for wind gradient effect 581
 - (c) Sail camber control 582
 - (d) Evolution of the Finn mast 590
 - (e) Other methods of sail camber control 595
 - (4) More about headsail fairings, leading edge function and tell-tales 601
 - (a) Tests on head-foils 602
 - (b) Padded sails 607
 - (c) Leading edge function 610
 - (d) What do the tell-tales tell? 613
 - (5) Sail interaction, slotted foils 627
 - (a) Explanation of slotted foil action 628
 - (b) The effects of the mainsail on the jib 639
 - (c) The effects of the jib on the mainsail 642
 - (d) Some results of wind tunnel tests on sail interaction 642
 - (e) Tests on genoa overlap 651
 - (6) Downwind rolling 653
 - (a) Rolling in still water 654
 - (b) Self-excited rolling 658

(c) Results of wind tunnel experiments	666
(d) The influence of course sailed β	667
(e) The influence of trim angle δ_m	667
(f) The influence of wind velocity	670
(g) The influence of damping	671
(h) Anti-rolling sail	675
References and notes	676
Appendix 1 Conversion factors, symbols and definitions	679
(a) Dimensions and units	679
(b) Conversion tables	683
(c) Tables of conversion factors	685
(d) Scientific notation	687
(e) The Greek alphabet	687
Appendix 2 Are winged keels a great invention?	689
Appendix 3 High-speed sailing	713
Appendix 4 Methods of performance prediction	731
Index	751
